SUMMARY

Deliverable D9.2 provides an overview of the dissemination and exploitation activities carried out during the first half of the project, covering the period up to month 18. It reviews the activities originally planned in the project's dissemination plan and documents the activities that were implemented during this period, including relevant changes and additions that emerged as new dissemination opportunities became available. The updated dissemination plan for the remaining project period is also presented.

A selection of dissemination activities is described in greater detail to illustrate the range of approaches used to communicate the project's objectives, activities, and results to relevant scientific, industrial, and broader stakeholder communities. These activities include participation in and contributions to conferences and trade fairs, as well as clustering and collaboration activities with other projects and initiatives. The deliverable also covers dissemination through printed and online publications, together with communication via social media and other digital channels. These activities support the visibility of the project and facilitate the exchange of knowledge and results with relevant communities and potential stakeholders.

The second part of the deliverable addresses the exploitation of the project results. During the first half of the project, 16 Key Exploitable Results (KERs) were identified as having particular potential to contribute to the project's expected impact. Each KER is described in detail, including its main characteristics, innovative aspects, relevant intellectual property considerations, potential implementation and exploitation pathways, and associated risks. The individual descriptions provide a structured overview of the results and their potential relevance beyond the project.

Overall, the deliverable documents the evolution of the project's dissemination activities and provides a comprehensive characterisation of the identified exploitable results. It establishes the basis for continued dissemination, communication, and exploitation activities during the second half of the project.
